

Precast STEPS

- Hollow and lightweight to avoid sinking and settling in soil; yet poured with reinforced 5000 psi concrete in one solid piece. Guaranteed to never sink or settle ... or we'll set 'em straight!
- Unlike wooden steps which rot, fade, separate and warp, Pepin Precast Steps require no maintenance for life! Guaranteed never to crack or fade.
- Use for either an entrance to a home or building, in between LOC-Blocks, (also see our step blocks!) or embedded into a sloped hill.
- Available in natural or a myriad of concrete colors. Stone and brick face and sides are optional.
- Custom Railings may be added, made from rugged yet attractive wrought iron. Note that railings are typically required by most home-owners insurance policies.
